Szabad Nep, No 91, 1949.

DEMAND FOR INDUSTRIAL WORKERS INCREASED

To realize the Five-Year Plan in industry, about 300,000 new industrial specialists will be needed. About 100,000 engineers and technicians must be added to this figure. In addition, 60,000 specialists will be needed at the machine tractor stations.

In the building industry, about 25,000 - 30,000 new specialists will be needed; the majority of these will be trained men now working as helpers.

The Iren, metal, and machine industry will be expanded. A new industrial combine and 10 new workshops will be constructed at Mohaos. The existing shops will also be expanded. This will recult in the need for 100,000 new workers, chiefly specialists.

For the spinning and weaving mills of the textile industry, only 6,000 new textile workers will be needed. Five new textile mills will be built in those areas where there is an over-supply of labor. This year the spinning mill at Szeged will be completed.

During the 5 years of the plan 12 new clothing factories will be built, creating a demand for 7,000 new specialists.
